ZEPHYR ADOPTS SEMI-ANNUAL FINANCIAL REPORTING

Halifax, Nova Scotia – May 1, 2026 - Zephyr Minerals Ltd. (TSXV: ZFR) (OTC: ZPHYF) (“Zephyr” or the “Company”) announces that it will rely on Coordinated Blanket Order 51-933 to transition to semi-annual financial reporting (“SAR”). This framework permits eligible venture issuers listed on the TSX Venture Exchange (“TSXV”) to move from quarterly to semi-annual reporting.

By adopting SAR, Zephyr aims to reduce the administrative and financial burden associated with quarterly reporting, allowing management to focus its resources on its exploration and development activities.

As a result, the Company will no longer file interim financial statements and related Management’s Discussion and Analysis (“MD&A”) for the three- and nine-month periods ended March 31 and September 30. The Company will continue to file audited annual financial statements within 120 days of December 31, and six-month interim financial statements and related MD&A within 60 days of June 30.

The Company remains committed to timely and transparent disclosure and will continue to report all material changes and significant developments in accordance with National Instrument 51-102 – Continuous Disclosure Obligations.

This news release is being filed pursuant to Coordinated Blanket Order 51-933 – Exemptions to Permit Semi-Annual Reporting for Certain Venture Issuers.

About Dawson Gold Property

The Dawson Gold Deposit hosts an Inferred Mineral Resource¹ prepared in accordance with National Instrument 43-101 (“NI 43-101”) of 343,000 tonnes grading 12.11 g/t for 133,500 ounces of gold at a 5 g/t cut-off with no top cut, and 116,300 ounces of gold at 10.55 g/t with a 40 g/t top cut. The estimate has an effective date of July 19, 2013. No updates to the resource estimate have been made to incorporate the results from drilling programs completed between 2017 and 2020. The deposit is open at depth, with exploration potential to the east and west. A Preliminary Economic Assessment² (“PEA”) was prepared in accordance with NI 43-101 with an effective date of March 21, 2017. Utilizing a gold price of \$1,250/oz, the PEA showed robust economics with an all-in sustaining cost (“AISC”) per ounce of \$692. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. Given the substantial increase in the gold price since 2017, the attractiveness of the Dawson project has been significantly enhanced. The potential to expand resources is excellent at depth on the Dawson Gold Deposit, along strike to the east in the 700-metre-long Sentinel zone, which has not been drill tested, and through follow-up drilling of promising targets in the Windy Gulch and Windy Point zones to the west. The Dawson project features key attributes, including a small footprint associated with the proposed underground mine, ownership or control of all necessary lands by Zephyr, a climate that supports year-round operations, and nearby infrastructure and industrial support.

About Zephyr Minerals Ltd.

Zephyr Minerals is mission focused on obtaining a mining permit for its 100% owned Dawson Gold property in Colorado with the view to continuing to advance this project to the next stage of development. The Company continues to wait for the Zimbabwean Government to grant two

Exclusive Prospecting Orders (“EPO”), covering 124,000 hectares applied for in 2021. The areas covered by the EPO applications are prospective for gold and lithium.

Notes

- ¹ The Report is titled Resource Estimate Technical Report for the Dawson Property Fremont County, Colorado, USA, dated September 6, 2013, and was prepared for Zephyr by Andrew Hilchey, P.Geo., Mercator Geological Services Limited, Isobel Wolfson, M.Sc., P.Geo, and Mark Graves, P.Geo..
- ² The report is entitled “National Instrument 43-101 Technical Report for the Dawson Property, Colorado, USA”, effective March 21, 2017 (the “Technical Report”). The Technical Report was prepared by independent engineering firm, Golder Associates Ltd., with input from a number of other specialized and experienced consulting firms, and is in accordance with National Instrument 43-101 - Standards of Disclosure for Mineral Projects. This PEA is preliminary in nature and includes inferred mineral resources that are too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. There has been insufficient drilling to define the inferred resources as indicated or measured mineral resource; however, it is reasonable to expect that the inferred mineral resources could be upgraded to indicated and possibly measured resources with continued drilling. There is no guarantee that any part of the mineral resources discussed herein will be converted into a mineral reserve in the future.

Qualified Person

Brian Arkell, B.S. Geology and M.S. Economic Geology, SME (Registered Member), AusIMM (Fellow) and SEG (Fellow), a Director of the Company, and a Qualified Person as the term is defined under National Instrument 43-101, has reviewed and approved the scientific and technical disclosure contained in this press release.
